

INFORMATION PROCESSING APPARATUS, CONTROL METHOD, PROGRAM,
AND STORAGE MEDIUM

Abstract

To implement actions associated with built-in buttons through operations from an external device.

An information processing apparatus 10 includes an output portion 205 for outputting information from the information processing apparatus to the external; a built-in button 185 for controlling the output portion 205 in response to an input from the external; a first input information receiving portion 140 for receiving external input information from an external input device 50 having keys different from the built-in button 185, the external input information being information input to any of the keys; and a controlling portion 150 for initiating the same processing as that performed when the built-in button 185 is entered if it is determined that the external input information matches preset configuration information.
